

MARIO LLANSÓ GONZÁLEZ-ANLEO

Computer Engineering Student

llansoanleo.mario@gmail.com | [LinkedIn](#) | [GitHub](#) | Personal portfolio website

ABOUT ME

I'm driven by curiosity about how technology, and artificial intelligence in particular, is changing the way we work and solve problems. I enjoy learning consistently and constructively, and I'm especially interested in how data analysis and machine learning can be applied to real engineering environments, where technical decisions have a tangible impact. I'm looking for an internship that lets me keep growing in a professional setting, bringing a solid technical foundation and a strong drive to learn.

EDUCATION

Bachelor's Degree in Computer Engineering

3rd year completed · 4th year starting September 2026

Universidad Alfonso X El Sabio (UAX), Spain

TECHNICAL PROFILE

Solid academic foundation in object-oriented programming, data structures and databases, with hands-on experience in Python, Java, C and C++. Applied knowledge of Machine Learning and data analysis using the Python ecosystem (Pandas, NumPy, Scikit-learn), along with an understanding of modular design and microservices-based architectures. Regular use of generative AI tools to support coding, documentation, code review and project structuring more efficiently.

TECHNICAL SKILLS

Languages: Python, Java, C, C++

Machine Learning & Data Science: Pandas, NumPy, Scikit-learn, TensorFlow, Keras; regression and classification models, decision trees, Random Forest, SVM, clustering, neural networks

Databases: SQL (basic/intermediate level)

Software Development: Object-oriented programming, modular development, microservices architecture

Systems & Tools: Linux, Git, Jupyter Notebook

AI Tools: Advanced use of generative AI for learning, coding, documentation and prototyping

Languages (spoken): Spanish (native) · English B2+ (Cambridge certified)

TECHNICAL PROJECTS

- **Sentinel — AI Incident Response Copilot.** Full-stack application (NestJS, Next.js, Prisma) with an AI agent (tool use, Anthropic API) that analyzes metrics, logs and deployment history to propose a root-cause hypothesis backed by cited evidence. Includes a deterministic safety layer that blocks destructive mitigations, auditable persistence of the reasoning trace, and a dedicated evaluation suite to measure the agent's accuracy and cost.
- **Shared-Housing Management Platform —** Web application built as a monorepo (Next.js + NestJS + Prisma) for managing shared housing: JWT authentication, email-based invitations, group and member management with roles, and a data model designed to scale toward future expense and task modules.
- **Personal portfolio website —** Personal website (in progress, hosted on Vercel) to document and showcase personal projects.

WORK EXPERIENCE

Catering and Events

- Teamwork, customer service and adaptability in fast-paced, dynamic environments.
- Responsibility and punctuality delivering tasks under tight deadlines and pressure.

ADDITIONAL INFORMATION

- Available for extracurricular internships.
- Genuine interest in artificial intelligence, data analysis, automation and their application to real engineering problems.
